EDUCATION

Virginia Tech, Blacksburg, VA, USA *2024.8 - present*

- Ph.D. in Electrical Engineering
- GPA: 4.0/4.0
- Advisor: Prof. Tom Hou

ShanghaiTech University, Shanghai, China *2021.9 - 2024.6*

- M.S. in Information and Communication Engineering
- GPA: 3.78/4.0
- Advisor: Prof. Yang Yang, Prof. Yong Zhou

South China University of Technology, Guangzhou, China *2017.9 - 2021.6*

- B.Eng. in Information Engineering
- GPA: 3.75/4.0 (89.00/100)
- Ranking: 8/233

RESEARCH EXPERIENCE

- **AirComp-assisted Hierarchical Personalized Federated Learning** **2022.6 - 2024.6**
  - Proposed an AirComp-assisted hierarchical personalized FL that simultaneously learns global and personalized models while mitigating interference through cloud/edge beamforming design, significantly improving convergence and accuracy in heterogeneous wireless networks
- **Edge Interval Control in Hierarchical Federated Learning** **2023.3 - 2023.6**
  - Developed an AirComp-assisted hierarchical FL that jointly optimizes edge aggregation intervals and device transceiver design via relaxation–rounding and Lyapunov-based algorithms, achieving faster convergence and higher accuracy under wireless communication constraints
- **Decentralized Satellite Federated Learning** **2023.6 - present**
  - Introduced a multi-orbit decentralized SFL framework that leverages intra- and inter-orbit ISLs for model aggregation without ground stations, analyzes convergence to guide local iteration settings, and develops a JRARS algorithm for joint routing, bandwidth, and power optimization, achieving faster convergence and lower energy consumption in LEO constellations
- **WOS** **2025.1 - 2025.6**
  - Proposed Wait-for-Optimal-Set (WOS), a semi-asynchronous federated learning scheme that adaptively selects clients based on computation latency and model-version gap while employing dynamic resource block allocation, achieving faster convergence and higher accuracy than existing methods in dynamic wireless networks
- **FedHusky** **2025.6 - 2025.9**
  - Proposed FedHusky, a hybrid FL framework that employs a calendar-based client scheduling, optimization-driven group formation, and dynamic birth–death processes to maximize client utilization, significantly improving convergence speed and training efficiency under small and heterogeneous datasets

TEACHING ASSISTANT

ShanghaiTech University
CS 287: Network Intelligence, Fall 2022

Virginia Tech
ECE 2714: Signals and Systems, Fall 2024 & Spring 2025

SKILLS

- **Programming**
  Python, Matlab
- **Languages**
  - Chinese (Native)
  - English (IELTS: 7.5; -Reading 7.5; -Listening 8.5; -Speaking 8.0; -Writing: 6.5)
